FOSTER VILLAGE TRAFFIC CALMING CHARRETTE

HONOLULU, HAWAII FINAL REPORT

JUNE 2000

Mayor Jeremy Harris
City and County of Honolulu
Department of Transportation Services

Prepared by:

R. M. TOWILL CORPORATION & WALKABLE COMMUNITIES INC.

Project Leadership:

Mayor Jeremy Harris

Councilmembers:

Dr. Duke Bainum
John DeSoto
John Henry Felix
Mufi Hannemann
Steve Holmes
Rene Mansho
Andy Mirikitani
Donna Kim
Jon Yoshimura

Department of Transportation Services

Cheryl Soon, Director Joe Magaldi, Deputy Director Paul Won, P.E. Chief Engineer

R. M. Towill Corporation

Jimmy Yamamoto, P.E. Project Manager Kevin Mendes, P.E. Jim Niermann Alan Fujimori, ASLA Harrison Rue

Walkable Communities, Inc.

Dan Burden, Director Michael Wallwork, P.E., Principal Engineer Erin Kilpatrick

Special Thanks:

Donna Kim, Foster Village Council Member

This report was prepared for the Honolulu Department of Transportation Services by R. M Towill Corp. and Walkable Communities, Inc. For more information on details found in this report contact the DTS Traffic Calming Program, (808) 527-5016. Walkable Communities, Inc. provides a helpful website at www.walkable.org.

Where Do We Go From Here?	21

Disclaimer

The contents of this report represents the knowledge, experience, and expertise of the citizens and authors in providing ideas and concepts to improve safety, access, mobility and livability through traffic calming and traffic management strategies. This report does not constitute a standard, specification, or regulation, and is not intended to be used as a basis for establishing civil liability. The decision to use a particular measure should be made on the basis of an engineering study of the location. This report is not a substitute for sound engineering judgement. Adherence to the principles found in this report can lead to an overall improvement in neighborhood traffic safety.

Introduction

People speed and cut through neighborhoods for a variety of reasons. Most neighborhood streets built in the past fifty years are designed for high speeds (30-40 mph) even though they may be posted at a lower limit. Meanwhile appropriate speeds for typical local streets are 25 mph. Many of our land uses are scattered. This results in families making an average of 10 car trips daily. The volume of vehicles chokes and strangles traffic flow at intersections, then backs into neighborhoods as drivers take short cuts to avoid back-ups. Many motorists are late for events and try to make up the time. We (motorists) are all guilty of these practices.

This report provides guidance on reducing this undesirable behavior along portions of Haloa Drive and Ala Oli Street in the Foster Village Neighborhood. Before entering into design of traffic calming features all neighborhood residents are asked to accept that the problems most often come from inside the neighborhood. Solutions therefore must be developed by the "stakeholders." Residents and property owners, who have much to gain from working together, are the backbone of finding workable solutions.

Six Step Process

Step 1

Foster Village was selected by the City as an area that would benefit from traffic calming. For many years, residents have been expressing their concerns about speeding and safety.

Step 2

R.M. Towill staff collected traffic volume, speed and crash records to determine existing conditions. University of Hawai'i Urban and Regional Planning program mapped traffic information using Geographic Information Systems (GIS).

Step 3

The Traffic Calming Team was oriented to the neighborhood through a walking audit and site inspection. Still and digital photos were taken, and a windshield audit of all principal streets in the neighborhood was conducted. The team took street width measurements, estimated block lengths, observed motorists' behaviors, interviewed pedestrians and other residents, and gathered available maps.

Step 4

The Foster Village Neighborhood hosted a community traffic calming charrette on February 28, 2000 at the Foster Village Recreation Center. Neighborhood residents were shown community photographs and given examples of traffic calming possibilities. Then the residents created a prioritized list of the traffic issues to be addressed. Finally, the neighbors worked in groups and marked suggested solutions on neighborhood maps.

Step 5

The engineering and traffic calming development team worked out a system solution to traffic speeding and volume, prepared conceptual engineering drawings of specific locations, and then selected tools for enhanced illustrated drawings. The concepts were reviewed with Department of Transportation Services staff, and put into a form for public presentation.

Step 6

Foster Village hosted a final workshop on April 11, 2000 at the Foster Village Recreation Center. Residents were shown a conceptual design map and drawings for the recommended traffic calming tools. Comments were received and are incorporated into this report. This report provides the final conceptual system map, and makes recommendations for implementation.
